

Tivoli Music System+ white/silver

You can play any audio source – DAB+, FM, CD, Bluetooth and aux-in – the Music System+ has it all. With a large, easy-to-read display that shows RDS and CD information, a clock with battery backup, two alarms, a sleep timer and a snooze function, the device offers everything you would expect from this all-in-one system.

Design

With its various finish options, the Music System+ model is attractive enough to fit into any room and, with its small stature, deceptively simple. The handcrafted wooden cabinet is both beautiful and acoustically optimized. The balanced ratio of speakers and controls continues the refined character of Tivoli Audio products.

Sound

The natural sound of Tivoli Audio, with enhanced bass and stereo reproduction. The two integrated rear-facing speakers create room-filling sound, and the magnetically shielded subwoofer, which is facing downwards, expands the bass range. Combine that with our SpacePhase Wide-Mode technology and experience stereo sound from an all-in-one compact system.

Operation

With integrated buttons and a single volume control, the Music System+ is easy to use. The small remote control allows the listener

to control all functions from across the room.

Connectivity

Radio, CD and Bluetooth in typical natural Tivoli Audio sound, but in stereo. With the addition of DAB+, you will be able to listen to all the latest stations in their high-quality digital format. Use the built-in AUX input to listen to music from an external audio source, or send the sound to the speakers via the sound recording output.
